Telecare Lodz, Poland

The ageing population and the COVID-19 pandemic, have resulted in the development of telemedicine and telecare being one of the biggest challenges for the healthcare system in the coming years.

The HRP Group has been assisting in the implementation of telecare solutions for seniors and dependent persons for several years and has a track record of success in this area.

In 2019, Lodz was the first city in Poland to decide to widely use telecare technologies among the senior citizens.

Our implementation has provided care to over 2500 residents of Lodz and the surrounding area. It is to this day the largest single implementation of telecare wristbands in a single city in Poland and one of the largest in Central and Eastern Europe.
